

Define these matters when you ask for inquiry for bars and battens

- SWL: safe working load to be lifted
- vertical speed, if electric hoist
- vertical travel
- length of batten
- it is recommended to locate wires at the distance of 3 m from each other
- double brakes
- demands for colors to those parts which are visible to audience

In the case of lighting batten info on power supply is needed

- how many dimmer lines
- how many sockets for each dimmer line
- possibly other supplies, such as Ethernet or standard power supply?
- mention if you want to specify what kind of power supply must be used between ceiling and batten, cable reel, energy chain or perhaps ladder

Control system

- some info is always needed
- please, have a look on control system appendices
